Profile Summary

Software Engineer with over 4 years of web development experience, including 2+ years of professional experience building reliable, scalable backend systems across fintech, SaaS, and AI-driven platforms. Strong in distributed microservices, API architecture, and database-driven backend development using TypeScript, Python and PostgreSQL. Experienced in designing automating deployment pipelines, improving system reliability, and collaborating in cross-functional squads.

Comfortable with strongly-typed language (TypeScript) and excited to work with Go. I care deeply about building products people use every day, solving customer problems, and delivering backends that are resilient, observable, and easy to maintain.

Technical Skills

- Languages & Frameworks: Python, TypeScript, Node.js, Nest.js, FastAPI, React, Next.js, Django
- Development: Full-stack applications, cloud infrastructure, system automation, embedded systems (basic)
- Databases: PostgreSQL, MongoDB, Supabase
- DevOps: Docker, GitHub Actions, Render, Vercel
- Tools: Git, Swagger, Postman, Jupyter, Figma, VS Code
- Backend & Systems: Distributed Systems, microservices, REST APIs, caching strategies, event-driven flows,
- Practices: Type Safety, API Contract Design, Automated Testing, Observability (basic), code reviews, observability (logs/metrics), Authentication flows, OWASP principles, API security, secure data handling

Professional Experience

Backend Engineer | CashWave (Fintech)

Mar 2025 – Present, Remote

- Improved system reliability by refactoring core services, enforcing TypeScript standards, and implementing structured logging for better observability
- Collaborated with product, design, and mobile teams to deliver features aligned with customer experience and business requirements
- Contributed to caching and performance strategies that reduced redundant queries and improved endpoint latency
- Reviewed PRs and supported junior engineers in understanding architecture, code quality and deployment workflows
- Implemented JWT authentication flows for secure API access

Software Engineer Intern

2024 – 2025, Nigeria

- Fixed bugs on production systems and improved team workflows using Git and Agile collaboration.
- Designed and shipped FastAPI-based backend services with PostgreSQL, supporting AI-driven education products.
- Worked with designers to implement high-quality UI/UX features.

Education

- BSc Accounting – Bowen University, Nigeria (Graduated 2022)

Projects & Highlights

- Recipe Recommendation System (FastAPI + PostgreSQL): Built a content-based filtering engine with a Next.js frontend (full-stack project).
- AI-driven Counseling Chatbot: Integrated Hugging Face NLP models with FastAPI backend and Next.js frontend.
- Built NLP pipelines using transformer-based LLMs (Hugging Face) for text understanding and conversational agents.
- Published LinkedIn articles on EDA, data cleaning, and ML workflow improvement.
